Coordinator:

A member of the Task Force has advised me that the purchaser of the Stimson property will not be held responsible for the costs of cleanup of toxic materials found on it. It was stated as "under Brownfield" or something such as this. Please provide me full details in substantiation of this.

Also, based upon data deemed reliable recently received, an amendment to the usage plan option stated in my January 2, 2003 letter to EPA is being considered. The "Hayfield Area" or a Stimson parcel in Section 14 may better accommodate the facility and the parking structure to be constructed, reserving available space in the Southwest Area, Sprinkler Field, Tree Nursery area, log storage yard for timber industry operations when market recovery provides for the expansion of sound timber operations.

Your attention to providing information requested will help set the Community health recovery plan.

Thank you.

Sincerely,

Stanley G. Davis
